SUMMARY

AI/ML Engineer with experience building and shipping production iOS apps and full-stack AI/fintech platforms. Strong in Python, LLM systems, and real-time data applications. Built and launched 2 App Store apps and multiple AI-driven products

SKILLS

Languages: Python (advanced), TypeScript, JavaScript, Swift, Objective-C, Java, C, SQL, HTML5, CSS

AI/ML: LLM-powered conversational AI, prompt engineering, multi-agent systems (LangGraph), RAG pipelines, emotional intelligence systems

Frameworks: LangGraph, RAG pipelines, Spring Boot, ReactJS, Next.js, Node.js, FastAPI, Flask, Vue.js

Developer Tools & Platforms: AWS, Azure, Docker, Git, Postman, Prisma, Supabase, PowerBI, Jira, Redis, PostgreSQL, Vercel

Domains: iOS app development, real-time trading dashboards, real-estate tokenization (RWA), privacy-first design, data visualization, guided journaling, rapid prototyping, building in public

PROJECTS

Gloomberg — AI Trading Terminal

Python Next.js FastAPI

- Built retail-friendly Bloomberg-style terminal with real-time dashboards, interactive charts, AI chat, technical indicators (RSI, MACD), and strategy backtesting
- Full-stack system with PostgreSQL + Redis caching; directly informed by personal futures trading experience
- **Live:** gloomberg-red.vercel.app — **GitHub:** [repo](#)

Compass — AI Product Intelligence Platform

TypeScript Next.js Supabase

- LLM-driven system that analyzes user feedback and generates actionable product insights, PRDs, prioritized roadmaps, and interactive knowledge-base chat
- Implemented Implemented RAG pipeline + AI chat + roadmap/PRD generation
- **Live:** compass-iota-tan.vercel.app — **GitHub:** [repo](#)

MapleVault — Real-Estate Tokenization Platform

Node.js Express Supabase

- Full platform for tokenizing real estate assets (RWA) with modern marketing site, lead-generation forms, secure backend, validation, and rate limiting
- **Live:** maplevault.vercel.app — **GitHub:** [repo](#)

Serenica — AI Mood Tracker & Mental Wellness App

Swift iOS

- Published privacy-first AI companion for mood tracking, guided journaling, and calm conversational emotional support (zero data collection)
- Released v1.0 (Jan 12, 2026) and v2.0 (Jan 27, 2026) with performance optimizations
- **App Store:** [link](#)

Uncravr — Nicotine Craving & Habit Tracker

Swift iOS

- Built and launched craving-management tool with streaks, milestones, science-backed recovery timelines, and savings tracker
- Achieved perfect 5.0/5 App Store rating; privacy-first design
- **App Store:** [link](#)

- Architecting autonomous multi-agent system for trading decisions, portfolio optimization, market analysis, and real-time execution
- Toronto-based project actively targeting Y Combinator Summer 2026
- **GitHub:** [repo](#)

EXPERIENCE

Independent AI/ML Engineer & Indie Hacker

2025 – Present

- Shipped two production iOS applications (Serenica and Uncravr) to the Apple App Store in early 2026, delivering privacy-first AI companions with mood tracking, guided journaling, and habit-breaking features
- Developed and open-sourced 8+ full-stack AI and fintech platforms from concept to live deployment, including real-time trading dashboards, product intelligence tools, and real-estate tokenization systems
- Architected Cortex Capital, an autonomous multi-agent AI hedge-fund swarm using LangGraph for trading decisions, portfolio optimization, market analysis, and real-time execution
- Built and deployed production-grade full-stack applications using Next.js, FastAPI, Supabase, PostgreSQL, Redis, and Docker while maintaining strict privacy-first architecture across all projects
- Actively build in public on X (@taranx0911), sharing technical deep-dives, product updates, and learnings with a growing audience of indie hackers and developers
- Leveraged hands-on futures trading and poker expertise in probability modeling, risk assessment, and high-stakes decision-making to enhance product features, backtesting engines, and user-facing habit tools

EDUCATION

Bachelor of Computer Science

Algoma University, Ontario

Expected 2026

ADDITIONAL

- 69+ GitHub contributions in the past year across 8+ active repositories, demonstrating consistent delivery velocity as a self-directed builder
- Active futures trader and poker player — applies advanced probability, risk management, and decision-making under uncertainty to both quantitative trading systems and habit-breaking applications
- Building in public on X (@taranx0911) with 261+ followers, regularly sharing progress, code, and lessons learned from shipping production AI and fintech products
- Passionate about privacy-first design, mental wellness technology, and autonomous AI agents
